ABSTRACT

This bibliography contains selected references to English language publications dealing with existing depression or depressive symptoms and suicide or attempted suicide in children to the age of 12. A brief review of the recognition of depression in children opens the document. The 337 citations are taken from the period January 1983 through April 1987. The citations consist of journal articles, books, and dissertations. Materials that focus on depression or suicide primarily in mothers and other family members are not included. The search strategy is included. (ABL)

Although depression is considered to be the most common mental illness in the United States, depression in children did not begin to be recognized by mental health professionals until the late 1960's. As acceptance of the diagnosis in nonadults grew, so did the literature; but many questions remain concerning such matters as etiology, earliest possible age of onset, treatment modalities, diagnosis, and family interactions. Both genetic and environmental factors regardless of age are currently being studied, and the knowledge gained will be particularly useful in identifying and dealing with depression in this earliest age group. Moreover, as depression in the young is more understood, light will also be shed on the phenomenon of suicide in the young.

This bibliography contains selected references to English-language publications dealing with existing depression or depressive symptoms and suicide or attempted suicide in children to the age of twelve. The citations consist of journal articles, books, and dissertations. Materials that focus on depression or suicide primarily in mothers and other family members are not included.

The publications of the National Library of Medicine's (NLM) Literature Search series contain citations to journal articles and monographs selected from a variety of online databases. NLM databases utilized include MEDLINE, BIOETHICSLINE, CANCERLIT, HEALTH PLANNING AND ADMINISTRATION, TOXLINE, and CATLINE, among others.

Citations are formatted according to the rules established for publication of *Index Medicus*. A full explanation of the elements as they are included in the citations may be found in each issue of that publication as well as in *Abridged Index Medicus*. A bracketed title indicates that the article is in a foreign language. For these foreign titles, the language of publication is shown by a three letter abbreviation at the end of the citation.

This publication is not copyrighted and may be freely reproduced. A complete list of all available Literature Searches appears in each issue of *Index Medicus* and *Abridged Index Medicus*. For a single copy of any of the other publications in this series, send a gummed, self-addressed label to: Literature Search Program, Reference Section, National Library of Medicine, 8600 Rockville Pike, Bethesda, MD 20894.
